

WELLNESS SAUNAS FOR
THE NETHERLANDS

OVERVIEW

This year, four more saunas were added, bringing the total number of locations in the Netherlands to nine, all of which will be equipped with intercoms from DoorBird.

Kuuma Sauna is a renowned operator of saunas that are characterized by their minimalist and functional design. They present a social and sustainable alternative to the widespread large-scale wellness centers in the Netherlands.

There are currently five locations in the Netherlands, including two in Amsterdam and others in Nijmegen, Scheveningen Beach and Wijk aan Zee. Around 2,000 guests are welcomed every week and early booking is often essential.

The saunas are self-service facilities, which means there is no need for an on-site host and everything can be conveniently managed remotely. Guests receive an individual door code after booking with detailed instructions on how to access the sauna.

IP Video Door Station

WHY DOORBIRD?

The self-service saunas required a reliable system that would allow individual access codes to be managed and released to allow guests to enter. It was also important that guests could communicate via an intercom system if required.

The following points were of crucial importance when selecting the system:

- Video and audio calling: the Doorbird systems enable video and audio calls via smartphones, tablets (iOS, Android) or landline phones (SIP) to ensure that staff are always available and can grant guests quick access.
- Individual schedules and action plans: Doorbird enables the creation of regular or individual schedules for maintenance work or cleaning operations.
- Microphone quality: Clear voice transmission combined with effective echo and noise cancellation (AEC, ANR) ensure that guests always feel comfortable and safe.
- Simple network integration: The Doorbird systems can be easily integrated into the network and enable rapid installation via network cable or bell wire (with 2-wire transformer) to the RJ45 socket (PoE, network data).
